I have updated the previously provided matrix for CYE20 as well as noted indicators on RF682 in response to some additional feedback requests from MCO's. A summary of the updates is outlined below, any questions please let me know. Thanks!

- Split the 02 Acute Hospitals DRG Eligible into two columns, one for hospitals qualified under the CAH specifications and one for hospitals qualified under the non-CAH specifications
- Added additional new indicators for RF682 to designate the Hospitals qualified under the CAH specifications, for ease of identification (these updates will be reflected in the next ShareInfo extract of this information)
- Added consistent details for indicator to % in the % Increase row

Although this will be an Agenda topic for the 8/7 AHCCCS-MCO Technical Consortium and many of you may have already begun or completed you systems remediations for this based on the public notice, I am providing this document now to share on a timely basis and allow you to submit questions, etc.

Any questions let me know. Thanks!
